# How to deploy with Microsoft Azure

Step1: - Create your Microsoft Azure account and make a new storage account and name it

Step2: - Here I named it as geminipush, now select the geminipush storage account

Step 3: - Go to Containers and select the web container

Step 4: - Upload all your files inside the web container (make sure about giving the path and proper formatting)

Step 5: - Go to static website and give the name of the index and the error document.

Step 6: Now you can use the generated index document link to access your website
